Exercise 7.1

(2) Pencil \cong Pen

~~Math Textbook~~ \cong Science Textbook

(3) $\triangle ABC \cong \triangle FED$

The corresponding \cong parts of a \triangle are:

- (i) $\angle A \cong \angle F$
- (ii) $\angle B \cong \angle E$
- (iii) $\angle C \cong \angle D$
- (iv) $\overline{BC} \cong \overline{ED}$
- (v) $\overline{AC} \cong \overline{FD}$
- (vi) $\overline{AB} \cong \overline{FE}$

(4)

The corresponding \cong parts of a \triangle are:

- (i) $\angle E \cong \angle C$
- (ii) $\overline{EF} \cong \overline{CA}$
- (iii) $\angle F \cong \angle A$

(iv)

$$DF = BA$$

End of Exercise 7.1

Example 2: In Δ s ABC and PQR, $AB = 3.5$ cm, $BC = 7.1$ cm, $AC = 5$ cm, $PA = 7.1$, $QR = 5$ cm and $PR = 3.5$ cm

Ans

Here, $AB = PR (= 3.5 \text{ cm})$
 $BC = PQ (= 7.1 \text{ cm})$
 and $AC = QR (= 5 \text{ cm})$

This is showing that the three sides of one Δ are equal to the three sides of the other Δ . So, by SSS Δ Congruence, these Δ s are \cong . From the above three equality relations, it can be easily seen that $A \leftrightarrow P$, $B \leftrightarrow Q$ and $C \leftrightarrow R$

So we have $\Delta ABC \cong \Delta PQR$

Example 3: $AC = CD$ and $AB = CB$

- (i) State the three pairs of equal parts in $\triangle ABC$ and $\triangle CBD$

- (ii) Is $\triangle ABD \cong \triangle CBD$? Why or why not?
(iii) Does ~~BD~~ BD bisect $\angle ACC$? Give reason.

Solution (i) In $\triangle ABD$ and $\triangle CBD$, the three pairs of equal parts are given below:

$$\begin{aligned} AB &= CB \text{ (Given)} \\ AD &= CD \text{ (Given)} \\ \text{and } BD &= BD \text{ (Common)} \end{aligned}$$

- (ii) From (i) above, $\triangle ABD \cong \triangle CBD$ (By SSS congruence rule)

- (iii) $\angle ABD = \angle CBD$ (Corresponding parts of congruent \triangle)
So, BD bisects $\angle ABC$
